

PROFESSIONAL STAFF AND CONSULTATION

TriHealth's professional team has developed working relationships with many area physicians and their office personnel. An important part of these relationships is the professional consultation offered to help our clients determine the clinical relevance of results.

Board-certified pathologists provide professional support and consultation. The professional staff includes individuals with subspecialties and/or expertise in Hematology, Microbiology, Cytopathology, Renal Pathology, Gastrointestinal Pathology and Hepatopathology. These individuals are readily available to consult on clinical laboratory test utilization and interpretation, to review slides, or to provide their expertise in a wide array of specialized areas.
